

Technical Specifications

Materials	Cast iron.
Connections	½" flow and return bottom opposite end.
Test pressure	10.5 Bar
Testing authority	EN
Maximum operating pressure	7 Bar
Maximum working temperature	110°C
Packaging	In primer finish, product will be strapped on a pallet If product has been painted, it will be supplied wrapped in bubble wrap and strapped on a pallet

Terms & Conditions

All products must be inspected once removed from the packaging and The Radiator Company notified within 28 days of delivery of any scratches, blemishes or other damage. The Radiator Company will then replace the radiator.

Imperfect radiators should therefore not be fitted and The Radiator Company will not accept responsibility for replacement of scratched or damaged radiators once they have been fitted. This includes any consequential loss or cost of fitting.

If The Radiator Company are not notified within 28 days of the date on the signed delivery note then it will be deemed that The Radiator Company have fully complied with its obligations and claims will not be considered.

Failure to comply with any of the above may invalidate any claims.

We recommend that after you check the product on delivery that it is stored in its packaging to prevent damage prior to installation. The Radiator Company cannot accept responsibility for items damaged after delivery.

Guarantees & Liabilities

As we are not the manufacturers of this product we will take all reasonable endeavours to make over to you the benefit of any warranty or guarantee given by the manufacturer, which is 10 years for our cast iron range. (Copies of specific guarantees for any of our products are available on request).

The guarantees in all cases are subject to the products being installed in accordance with British and or European standards as well as these fitting instructions. The guarantees in all cases are restricted to the free of charge replacement or repair of the failed product only. Our liability will under no circumstances extend beyond the repair or replacement of the product supplied by us. Claims for either labour in replacement or damage to property are not admissible. Any goods that are returned, in the event of a problem, will belong to The Radiator Company.

Please read these joining instructions and terms and conditions carefully prior to installation. Failure to do so may invalidate the warranty.

CAST1.2

Cast Iron Joining Instructions

Please note: that after manufacture these radiators are pressure tested and cleaned inside, they may, therefore, contain a small amount of water. If handling on a finished floor ensure that adequate protective material is in place before working on the radiators.

A minimum of two people are required to join these sections to ensure safe handling of the radiators and to facilitate an effective water tight seal.

You will need: two nipples, 2 gaskets per join, appropriate size joining key, extension rod for extra torque, bushes and gaskets.

Cast Iron radiators have specific left and right hand threaded bushes and these can be easily damaged if forced or incorrectly fitted (this will inevitably cause leaks). Bushes require a dry fit connection only; you must not use any Compound materials (e.g. Jet Blue) or Plumbers Hemp. If you choose you may use up to 4 turns of PTFE tape to help seal the threads (the tape should be applied in the direction of the thread and no more than this amount should be used as this may cause leaks to occur)

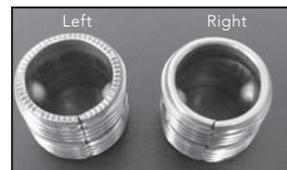

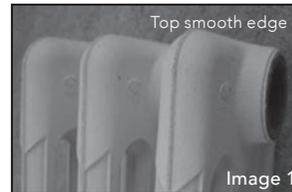

1. To facilitate the joining process the radiator sections must be raised off the ground, (on a firm flat surface) to allow the joining key to turn freely. The radiators should not be placed upright or on end when joining.

2. Before joining the radiators together please remove the plastic bungs.

3. Position all sections to be joined the correct way up; place the end with a rough casting finish along the join at the bottom and the end with the smooth cast finish at the top. The radiators also need to be the correct way round; ensure the same trade mark or manufacturers stamp are all facing the same way. (Image 1 & 2)

4. Clean the surfaces to be joined using a small blade or similar to remove any dirt or deposits from the face and screw thread.

5. The radiator sections and joining nipples have one left and one right hand thread (image 3) the Nipples must be inserted correctly to avoid cross threading. The end of the nipple with the left hand thread has a serrated edge; the end with the right hand thread has a smooth edge.

Cast Iron Joining Instructions

6. Fit a yellow paper joining gasket over each nipple; push them carefully onto the nipple, making sure they do not tear, until they sit in the groove in the middle of the nipple. (image 4)

7. Having identified the correct insertion direction, using 1 hand turn only screw in a pair of nipples into the end of one radiator (screwing the nipple in further at this stage may cause problems obtaining a water tight seal.) (Image 5)

8. Offer up the second radiator, making sure that the two nipples enter the second section evenly.

9. Measure the distance required for the key to identify how far in you need to place the key and then insert the key through the open end of the water way to locate the lug within the first nipple to be joined. (Image 6)

10. The two nipples should now be tightened alternatively to keep the radiators parallel. The key should be kept in a central position in the waterway whilst turning. Tighten the first nipple with 2 turns only, pulling the two sections together. Repeat the process alternating between nipples, until both sections are joined hand tight.

11. Once the joins have been hand tightened both will need extra torque applied to make a water tight seal. To obtain this use a metal extension rod to apply greater leverage. (image 7)

12. Once the joins are satisfactorily tightened you can fit the blanking plugs, bushes and gaskets. Please note these items are also left and right handed to avoid cross threading.
