

Technical Specifications

Materials	Mild Steel
Connections	½" flow and return.
Test pressure	6.5 Bar
Testing authority	EN442
Maximum operating pressure	5 Bar
Maximum working temperature	95 °C
Packaging	Wrapped in plastic with polystyrene protection in cardboard box

PLEASE NOTE: Systems using micro bore pipework must have adequate pressure and flow rates for the number and style of radiators on the system.

Terms & Conditions

All products must be inspected once removed from the packaging and The Radiator Company notified within 28 days of delivery of any scratches, blemishes or other damage. The Radiator Company will then replace the radiator.

Imperfect radiators should therefore not be fitted and The Radiator Company will not accept responsibility for replacement of scratched or damaged radiators once they have been fitted. This includes any consequential loss or cost of fitting.

If The Radiator Company are not notified within 28 days of the date on the signed delivery note then it will be deemed that The Radiator Company have fully complied with its obligations and claims will not be considered.

Failure to comply with any of the above may invalidate any claims.

We recommend that after you check the product on delivery that it is stored in its packaging to prevent damage prior to installation. The Radiator Company cannot accept responsibility for items damaged after delivery.

Guarantees & Liabilities

As we are not the manufacturers of this product we will take all reasonable endeavours to make over to you the benefit of any warranty or guarantee given by the manufacturer, which is usually five years on most of our range. (Copies of specific guarantees for any of our products are available on request).

The guarantees in all cases are subject to the products being installed in accordance with British and or European standards as well as these fitting instructions. The guarantees in all cases are restricted to the free of charge replacement or repair of the failed product only. Our liability will under no circumstances extend beyond the repair or replacement of the product supplied by us. Claims for either labour in replacement or damage to property are not admissible. Any goods that are returned, in the event of a problem, will belong to The Radiator Company.

Fittings Instructions

The Intenso's unique design features flat tube front face with additional rear fins for increased output.

Please read these instructions and terms and conditions carefully prior to installation. Failure to do so may invalidate the warranty

Diagrams of Intenso

CAUTION: This Radiator is heavy and will need at least two people to fit.

1 Unpack & Inspect

The Radiator Company prides itself on selecting products from manufacturers who exercise tight quality control measures. We only select models with excellent standards of welding and brazing, as well as high quality finishes. All of our products are well packaged and should reach you in perfect condition. Just in case however, we offer a minimum 5-year no quibble guarantee for all radiators and towel rails.

Please carefully unpack and inspect this radiator and all fittings. Please check that the diverter is present in the bottom collector. Simply remove both plugs and look down the collector, you should not be able to see through to the other end. If a diverter is not present call us on 01342 302250 and we will arrange one to be sent out.

The Radiator Company must be notified of any shortages or damage within 28 days of delivery. For further information please see terms and conditions on back page.

2 Contents

You should have:

- 1 Radiator
- 4 Wall brackets

You will need:

- Tape measure
- Electric drill and bits
- Spirit level

3 Identify the Diverter

When fitting the radiator the diverter needs to be at the bottom.

Simply remove both plugs and look down the collector, you should not be able to see through to the other end. If a diverter is not present call us on 01342 302250 and we will arrange one to be sent out.

4 Mark Bracket Positions

Using the positions in the diagram opposite, mark the two top brackets and fix on the brackets.

With full support, lift the radiator onto the brackets (do not leave the full weight of the radiator on the two brackets as this will not be sufficient support)

Mark the two bottom brackets which should be 30mm up from the bottom and 80mm in from the sides.

5 Fix Brackets

Using a suitable drill bit, screws and plugs, fix the brackets and level with a spirit level. Please see diagrams.

PLEASE NOTE :

It is essential that all brackets are level to ensure a vertical alignment for connecting the pipework.

6 Hang Radiator & Commission

With the brackets firmly fixed, and level, with the diverter at the bottom, the radiator is slotted in and lowered directly onto the brackets.

Two people will be needed to lift the radiator due to the weight.

Please Note:

In accordance with Part L1 2006 of the Building Regulations and BS7593:1992 code of practice for the treatment of hot water and central heating systems, we strongly recommend flushing the heating system post installation of new radiators and then adding the correct quantity and type of inhibitor for use with your radiator and system to prevent corrosion. Damage caused to systems not protected by a suitable inhibitor will not be covered by manufacturer's guarantee.

Pipe Centres

Pipe centres left to right	width of radiator plus valves
Pipe centres from wall	85mm
Depth from wall	114mm
